

IQ Adventurous Strategy

The aim of this portfolio is to provide an adventurous investment approach by investing through collective investment schemes.

The portfolio will invest principally through global equities, themes, property, alternatives and (to a lesser extent) fixed-interest securities. The portfolio can also hold a percentage weighting in cash deposits for both liquidity and tactical reasons.

Quarterly Commentary

The first quarter of the New Year was dominated by rising bond yields and a rotation out of equity growth stocks into value. The announcement of a further US stimulus package and the phenomenal success that the vaccine rollout has enjoyed in the US and in the UK were the two main drivers behind this.

It has now been over a year since the global equity markets collapsed before rallying back, recording their shortest bear market in history; and recent predictions regarding the reopening of the global economy have meant further advancements for risk assets.

Other asset classes – such as commodities – have also benefitted from the potential for global GDP numbers to see significant improvement. The prospects of increased manufacturing demand, China's insatiable appetite for commodities and growing investor interest in sustainable themes have been behind many of their price movements. While overall inflation remains relatively low, the recent rise in commodity prices is beginning to show up in producer price inflation, which is usually good news for the value end of the market. Nevertheless, there are still many good quality growth opportunities in technology and in the green energy sector. Admittedly, some equity valuations do look rather stretched but there is a positive outlook for corporate earnings over the coming months which should support many of those higher valuations.

As lockdowns ease, vaccination programmes continue and central bank policies remain accommodative, the global economy is now expected to strengthen significantly between now and the end of the year. This is likely to create a further positive backdrop for risk assets such as global equities and a broadening out of stock market asset allocations. Covid-19 will doubtless leave an enduring mark on people's lives and on the business community. Just as importantly, the pandemic is predicted to result in the fastest growth in GDP in a generation, as well as catalysing major advances in disruptive technologies and the green revolution – all of which will mean further exciting investment opportunities for the future.

Strategy Commentary

Performances have been mixed across funds over the past quarter: rising government bond yields, a rotation to value and concerns over higher inflation have combined to cause widespread volatility in global markets. Our top performing three funds were **Artemis US Smaller Companies (+9.61%)**, **iShares S&P 500 ETF (+5.13%)** and **Liontrust Special Situations (+4.69%)**. The strong performance of the Artemis fund reflects the outperformance of smaller US-based companies compared with the wider market. This can be attributed to the efficient roll-out of the vaccine programme and the announcement of a further stimulus package which should benefit many of these smaller businesses.

The worst performing fund over the quarter was the **JPM Japan (-8.56%)** reflecting the underperformance of the Japanese market against a backdrop of a weakening Yen in response to the fierce rise in US Treasury yields. Many Japanese companies also suffered from the extended state of emergency declared to contain the Covid-19 pandemic. This affected both corporate and household spending.

Throughout Q1, we continued to support those high-quality, global growth businesses with strong balance sheets – rather than the cyclical stocks that benefitted from the rotation out of growth and into value. While a strong global economic recovery is still likely to benefit the cyclical sectors over the short term, we believe over the long term that our pursuit of high-quality businesses will be justified.
