

IQ Worldwide Strategy

The aim of this portfolio is to provide a worldwide investment approach by investing through collective investment schemes.

The portfolio will invest principally through global equities and thematic strategies to capture above-average global returns. The portfolio can also hold a percentage weighting in cash deposits for both liquidity and tactical reasons.

Quarterly Commentary

The first quarter of the New Year was dominated by rising bond yields and a rotation out of equity growth stocks into value. The announcement of a further US stimulus package and the phenomenal success that the vaccine rollout has enjoyed in the US and in the UK were the two main drivers behind this.

It has now been over a year since the global equity markets collapsed before rallying back, recording their shortest bear market in history; and recent predictions regarding the reopening of the global economy have meant further advancements for risk assets.

Other asset classes – such as commodities – have also benefitted from the potential for global GDP numbers to see significant improvement. The prospects of increased manufacturing demand, China's insatiable appetite for commodities and growing investor interest in sustainable themes have been behind many of their price movements. While overall inflation remains relatively low, the recent rise in commodity prices is beginning to show up in producer price inflation, which is usually good news for the value end of the market. Nevertheless, there are still many good quality growth opportunities in technology and in the green energy sector. Admittedly, some equity valuations do look rather stretched but there is a positive outlook for corporate earnings over the coming months which should support many of those higher valuations.

As lockdowns ease, vaccination programmes continue and central bank policies remain accommodative, the global economy is now expected to strengthen significantly between now and the end of the year. This is likely to create a further positive backdrop for risk assets such as global equities and a broadening out of stock market asset allocations. Covid-19 will doubtless leave an enduring mark on people's lives and on the business community. Just as importantly, the pandemic is predicted to result in the fastest growth in GDP in a generation, as well as catalysing major advances in disruptive technologies and the green revolution – all of which will mean further exciting investment opportunities for the future.

Strategy Commentary

Performances have been mixed across funds over the past quarter: rising government bond yields, a rotation to value and concerns over higher inflation have combined to cause widespread volatility in global markets. Our top three performing funds were **iShares S&P 500 ETF (+5.13%)**, **L&G ROBO Global Robotics & Automation ETF (+3.51%)** and **Baillie Gifford Pacific (2.88%)**. Even in a quarter during which innovative companies suffered, we have been encouraged by the performance of the L&G Global Robotics and Automation ETF. With robotics and automation reaching an inflection point in recent years, we are on the brink of a massive and exponential wave of change – one that could be as transformative to our society as personal computers, the Internet and mobile devices have been over the past twenty years.

The worst performing fund over the quarter was **Comgest Growth Japan (-7.49%)**, reflecting the underperformance of growth stocks in Japan amid the wider cyclical rotation to value and a weakening of the Yen. Having performed so well in 2020, many of these companies remain well-placed to weather market volatility and outperform in the long term: they still have strong balance sheets and experienced management teams keen to embrace innovation.

Even amid cyclical rotations and market volatility, we remain long-term investors and are wholly committed to pursuing high-quality businesses for this strategy, which should appeal to investors with a higher risk appetite and a long-term time horizon.
