

IQ Adventurous Strategy

The aim of this portfolio is to provide an adventurous investment approach by investing through collective investment schemes.

The portfolio will invest principally through global equities, themes, property, alternatives and – to a lesser extent – fixed-interest securities. The portfolio can also hold a percentage weighting in cash deposits for both liquidity and tactical reasons..

Quarterly Commentary

Over the fourth quarter of the year, developed markets continued to rally, providing global investors with their third calendar year of strong positive returns. The continuation of accommodative central bank policy, strong corporate earnings growth, and the best year on record for global mergers and acquisitions helped to propel global markets higher throughout most of the year. While market volatility remained low, the emergence of Omicron (a highly infectious variant) combined with a significant rise in global inflation to levels not seen in decades, gave rise to some concern in the latter part of the year. This pickup in inflationary pressures has pushed up the prices of essential goods (such as food), as well as the cost of transport and utilities: more than two-thirds of people around the world are now feeling the squeeze. The Bank of England reacted immediately by raising interest rates to 0.25%, while many other leading central banks reduced their monthly asset buying programmes.

The performance of fixed-income markets remained flat, as they tried to assimilate the effects of higher inflation and likely central bank intervention. Equally, commodities have been among the most volatile assets in 2021 with coffee and crude oil to lithium and gas delivering stellar performances. Other economic challenges came in the shape of global supply chain bottlenecks and labour shortages, as the "Great Resignation" hit the headlines around the world. Nevertheless, Wall Street continued to hit new all-time highs, completing a hat-trick of positive annual returns, its best three-year stretch since 1999, and setting a near 90% return over the past 36 months.

Looking towards 2022, portfolios will need to stay broadly diversified: Covid, inflation and changes to central bank policy are likely to affect market sentiment over the coming months. However, above-trend GDP growth and robust corporate earnings should justify maintaining an overweight asset allocation towards global equities.

Strategy Commentary

Performances have been mixed across funds over the past quarter. The global recovery from the effects of Covid-19 was again disrupted with the emergence of the Omicron variant, with concerns over persistent inflation and rate hikes continuing to unsettle global markets. The top three performing funds over the quarter were **SSGA SPDR S&P US Select Consumer Staples ETF (+12.17%)**, **iShares Core S&P 500 ETF (+10.46%)** and **L&G ROBO Global Robotics and Automation ETF (+8.01%)**. With the annual inflation rate in the US surging to 6.8% in November, the highest level since 1982, the strong performance of the SSGA ETF reflects the benefit of investing in funds the constituents of which exhibit strong pricing power. Many of the companies featuring in the ETF are viewed as noncyclical, which means they are able to pass on price rises to consumers who remain dependent on their products – regardless of the state of the economy.

The worst performing fund over the quarter was **Comgest Growth Japan (-7.44%)**. Following a strong Q3 with the resignation of Prime Minister Suga and ambitious fiscal promises from new PM Fumio Kishida, the stock market dipped in November. This can be attributed to the increase in long-term interest rates in the US following heightened expectations of an early rate hike and the reappointment of Fed Chairman Jerome Powell. Currency fluctuations have historically impacted Japanese equities. With this rise in rates, the Yen dropped 3.15% over the quarter relative to the US dollar, further impacting many of the domestically focused businesses which comprise this portfolio. However, with a new PM committed to a stimulus package worth \$490 billion and encouraging data which suggests that Omicron is milder than previous variants, we feel positive in relation to Japanese equities as 2022 gets under way.
